

Efficient Solid/Liquid Separation Solutions

At Job Group, we specialize in cutting-edge solid/liquid separation solutions and equipment. Our technology, primarily based on filter presses, extends to pressure tank units, vacuum belt filters, and pressure/vacuum disc filters. With extensive experience handling challenging particles and sludges, we cater to diverse separation needs.

Key Features of Our Systems:

- 1. Product-Oriented Approach:** Our systems thrive when both the liquid and solid phases are products. As filter media manufacturers, we add extra value to our solutions.
- 2. Versatile Range:** From small manual filter presses (0.5 L chamber volume) to large, fully mechanized units (5000 L chamber volume) for the mining industry, we cover it all.
- 3. Filtration Strategies:** We excel in dead-end filtration (heavy particle loads, high feed pressure, rapid cycles) and active area-based polishing filtration.
- 4. Research-Driven:** Our process laboratory equips us with diverse research tools for scaling up and optimizing filtration processes.

Engineering Excellence: We oversee complete projects, from initial tests to full installations. Energy efficiency is paramount, minimizing water usage and pump energy consumption.

UK Manufacturing

At JOB Filtration UK, we are driven by a passion for customer satisfaction and a commitment to British manufacturing heritage.

JOB Group is one of the few companies with in house **Needling & Weaving** facilities, through to final confectioned end products such as **Filter Bags, Filter Belts & Press Cloths**.

- 1978 - Finsa

Tailormade solutions

JOB Group is a supplier of complete filtration solutions and products utilising advanced technologies and materials. We help our customers all the way from concept to finished engineered products, based on their specific needs and requests.
