

Filter bag changeout - Efficient service at the right time

Our UK based service team can play a vital role in maintaining uptime and ensuring efficient filtration.

We inspect and maintain all types of filters and equipment belonging to the filter unit such as rotary valves, fans, cleaning systems, ducts, conveyors etc.

- 1. Filter Bag Fitting:** Our SPA MPQC Core & Quarry qualified UK based team is here to change out your filter bags with efficiency and attention to detail.
- 2. Filter Cages:** Supply and installation of filter cage to suit your needs.
- 3. Inspections and Functional Checks:** Regular inspections are essential for maintaining filtration systems. Our UK based team conducts thorough checks on the entire system, ensuring optimal performance.
- 4. Leakage Control:** By utilizing our UV-reactive fluorescent powder, we can promptly detect damaged filter elements that might be responsible for dust emissions. This enables efficient planning of isolated repairs, minimising downtime and reducing the cost of major refurbishments.
- 5. LEV Inspections:** To comply with existing regulations and codes of practice, all Local Exhaust Ventilation (LEV) systems need to be regularly checked. We provide LEV inspection and testing services, complete with a comprehensive written report and drawings that adhere to current COSHH regulations.
- 6. Filter Media Analysis:** Understanding the condition of filter media is crucial to making informed decisions about replacements or improvements. We can offer various styles of Filter Media Analysis to suit your requirements.
